Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This growth inhibition is antagonised by Cybberellin. This products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds country that the trop plants grow tall. The present sequence represents the wheat Rht clone 5al genomic sequence.

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Trilicum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which hare resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                          The specification describes polypeptides encoded by the Rht gene (and content of the plant. When expressed in Triticum Aestivum, inhibit content of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-in-insensitive. Taller plants waild-type, the dwarfing out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as pacibutrazol, e.g. to allow use of a gibberellin biosynthesis, such as pacibutrazol, dwarf but let crop plants grow tall. The present sequence represents the wheat Rht clone C15-1 cDNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Triticum Aestivum polynucleotides - encode a polypeptide provides inhibition of the growth of plants, which inhibition antagonised by gibberellin, used to confer a dwarf phenotype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2224

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutraz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1501

New Triticum Aestivum polynucleotides - encode a polypeptide provides inhibition of the growth of plants, which inhibition antagonised by gibberellin, used to confer a dwarf phenotype

```
The specification describes polypeptides encoded by the Rht gene (and cits homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents the maize lal genomic clone sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            B
                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes polypeptides encoded by the Rht gene (and C its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by CC globerellin. This growth inhibition is antagonised by CC globerellin. The products can be used to provide Rht expression in CC plants, conferring a dwarf phenotype on a plant which is correctable by treatment with globerellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being globerellin-insensitive. Taller plants CC may be made by knocking out Rht or the relevant homologous gene in CC the plant of interest. Plants may be made which are resistant to CC compounds which inhibit globerellin blosynthesis, such as paclobutrazol, CC e.g. to allow use of a globerellin blosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents contact the plants grow tall. The present sequence represents the force where the contact the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1956
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Triticum Aestivum polynucleotides - encode a polypeptide provides inhibition of the growth of plants, which inhibition antagonised by gibberellin, used to confer a dwarf phenotype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rht gene; homologue; Triticum aestivum; wheat; growth inhibition; antagonist; gibberellin; dwarf phenotype; gibberellin biosynthesis; paclobutrazol; rice; expressed sequence tag; EST; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       insensitivity (gai) gene product (GAI), the expression of which can inhibits plant growth. However the inhibition is antagonised by gibberellin (GA), while gai expression confers a dwarf phenotype that is insensitive to GA. Manipulating gai and GAI expression can produce tall or dwarf plants, particularly the latter for increased resistance to lodging and increased yield. It may also allow regulation of flowering, i.e. plants remain in the vegetative state cuntil treated with GA, useful to inhibit bolting in spinach and clettuce. GAI can be used to raise specific antibodies for identifying homologous proteins or genes in other species. gai for fragments can also be used as probes or primers to identify and clone related sequences, or in the preparation of antisense or sense expression and sequences, or in the preparation of antisense or congress GAI may be resistant to Bakane disease. Manipulation of gai and GAI makes it possible to tailor the degree of dwarfism and GAI sensitivity to particular crops or situations.

germination rates of plants, photosynthesis, "glyoxylate metabolism," respiration, starch and sucrose synthesis and degradation, pathogen response, wounding response, cell cycle regulation, pigmentation, colling the metabolism, it is towering and senescence of plants and for modifying sink-source relationships in seeds, tubers, roots, and other storage organs leading to an increase in yield. The transcription factor polynucleotides and polypeptides may be used to alter the structure and developmental characteristics of plants such as soybean, wheat, corn, potato, cotton, rice, oilseed, sunflower, alfalfa, sugarcane, turf, banana, blackberry, blueberry, strawberry, raspberry, cantaloupe, carrot, cauliflower, onion, papaya, peas, peapers, pineapple, spinach, squash, sweet corn, tobacco, tomato, watermelon, rosaceous fruits and/or vegetable brassicas.

The present sequence is an Arabidopsis thallana transcription factor

                  such as soybean, wheat, corn, potato, cotton, rice, oilseed rape, sunflower, alfalfa, sugar came, turf, banana, blackberry, blueberry, strawberry, raspberry, cantaloupe, carrot, cauliflower, coffee, cucumber, egyplant, grapes, honey dew, lettuce, mango, melon, onion, papaya, peas, peppers, pineapple, spinach, squash, sweet corn, tobacco, tomato, watermelon, rosaceous fruits and/or vegetable brassicas. Transcription factors are key controlling elements of biological pathways and altering expression levels of lor more transcription factors can change entire biological pathways in an organism. Therefore manipulating transcription factor levels in plants offers great potential in agricultural blotechnology for modifying a plant's traits. Transcription factor cDNA
                                                                                                                                                        The present sequence is Arabidopsis thaliana transcription factor, G308 CDNA, a homologue of G307. The transcription factor is used for altering a plant's blochemical characteristics. The transcription factor may be used to alter the structure and developmental characteristics of plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CDS

The present sequence encodes a wild type plant protein of the GRAS family. The specification describes a mutant allele of the BZH gene, which contains a G1695A mutation resulting in the mutation E546K in the protein GRAS proteins are transcription factors implicated in regulation of the response to gibberellins and thus in control of morphogenesis and plant development. The mutant GRAS protein is used to produce dwarf plants, specifically crucifers. Dwarf plants may be sown earlier (increasing nitrate accumulation without risking excessive stem growth during winter), and have better resistance to cold and lodging. They are also easier to harvest and allow for better

                     The present sequence encodes a mutant plant protein of the GRAS family. The mutant allele of the BZH gene contains a G1695A mutation resulting in the mutation E546K in the protein. GRAS proteins are transcription factors implicated in regulation of the response to gibberellins and thus in control of morphogenesis and plant development. The mutant GRAS protein is used to produce dwarf plants, specifically crucifers. Dwarf plants may be sown earlier (increasing nitrate accumulation without risking excessive stem growth during winter), and have better resistance to cold and lodging. They are also easier to harvest and allow for better monitoring of the crop.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GRAS protein; BZH plant development;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                     The specification describes polypeptides encoded by the Rht gene (and clist homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by glbberellin. This products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with glbberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being glbberellin-insensitive. Taller plants waid-type, the dwarfing being glbberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit glbberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a glbberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents the partial sequence of the wheat rht-10 allele.

```

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in

In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutraz e.g. to allow use of a gibberellin biosynthesis inhibitor to keep wee dwarf but let crop plants grow tall. The present sequence was obtained after partially sequencing wheat Rht clone 5al.

latter for increased resistance to lodging and increased yield. It may also allow regulation of flowering, i.e. plants remain in the vegetative state until treated with GA, useful to inhibit bolting in spinach and lettuce. GAI-dl can be used to raise specific antibodies for identifying homologous proteins or genes in other species. gai-dl fragments can also be used as probes or primers to identify and clone related sequences, or in the preparation of antisense or sense expression regulating (or-suppressing) sequences. Rice plants that express Gal may be resistant to Bakane disease. Manipulation of gai-dl and GAI-dl may be resistant to the telegree of dwarfism and GA sensitivity to particular crops
                                                                                                                                                                                                                                                                                     The present sequence encodes the Arabidopsis thaliana gibberellin insensitivity (gai-dl) gene product (GAI-dl), the expression of which inhibits plant growth. However the inhibition is antagonised by gibberellin (GA), while gai expression confers a dwarf phenoty; that is insensitive to GA. Manipulating gai-dl and GAI-dl expression can produce tall or dwarf plants, particularly the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acid encoding gibberellin inhibitor GAI and related antisense sequences - used to create tall, or particularly, plants, especially crops such as maize, rice and wheat.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim
